2. The question Paper contains THREE sections: READING, WRITING & GRAMMAR and LITERATURE.
3. Attempt questions based on specific instructions for each part.

Section A: READING (20 MARKS)

1. Read the passage given below: (10 Marks)

Overpowering prey is a challenge for creatures that do not have limbs. Some species like Russell's viper inject poison. Some others opt for an alternative non-chemical method – rat snakes, for instance, catch and push their prey against the ground, while pythons use their muscle power to crush their prey to death. But snakes can't be neatly divided into poisonous and non-poisonous categories.

Even species listed as non-poisonous aren't completely free of poison. The common Sand Boa, for instance, produces secretions particularly poisonous to birds. So the species doesn't take any chance—it crushes its prey and injects poison as an extra step.

Do vipers need poison powerful enough to kill hundreds of rats with just one drop? After all, they eat only one or two at a time.

While hunting animals try their worst to kill most efficiently, their prey uses any trick to avoid becoming a meal, such as developing immunity to poison. For instance, Californian ground squirrels are resistant to Northern Pacific rattlesnake poison. Competition with prey is not the only thing driving snakes to evolve more and more deadly poison. Snakes also struggle to avoid becoming prey themselves.

Some snake killers have partial immunity to poison. Famously, mongooses are highly resistant to cobra poison and with their speed and agility, kill snakes fearlessly. It would be the death of cobras as a species if they didn't evolve a more deadly poison to stop mongooses.

Poison has another important role. It's an extreme meat softener, specific enzymes break up the insides of the prey. Normally, a reptile depends on the sun's warm rays to aid digestion.

But I wonder if we cannot use venom in our favour. In remote parts of India, local hospitality often involves leather-tough meat. I chew and chew until my jaw aches. If I spit it out or refuse, our hosts would be offended, I swallow like a python stuffing a deer down its throat and hope I don't choke. If only I had poison.

Based on your understanding of the passage, answer the questions given below:

9. What makes mongoose a snake predator?
10. What difficulty does the writer face when he is entertained in the remote parts of India?

Q2. Read the passage given below

(10 Marks)

The white tiger is an offspring of Bengal tiger, which has the necessary gene for white colouring. It has beautiful black stripes on a white coat. This species of animal has blue eyes and a pink nose.

A pure white tiger is totally white without any stripe, which is due to the presence of double recessive allele in the genetic code. It happens only in the Bengal tiger subspecies, and only one in 10,000 births can have it naturally. White tigers are rarely seen in the wild, and only twelve of them have been spotted in India since last one-hundred years. Tigers have a life-span of 10-15 years. They are solitary animals, and are fond of hunting at night. Their diet consists of any animals that they can catch, and can eat up to 40 pounds of meat at one time. After such a big meal, they usually remain away for several days from food.

They are slow runners, but good swimmers. They are poor climbers and cannot climb a tree easily. They live in an area ranging from 10 to 30 square miles depending upon the availability of prey, water and shelter. Habitat loss, poaching and expansion of human population have together contributed to their becoming endangered. They are widely hunted for their body-parts, which are used in traditional Chinese medicines. Genetic inbreeding is another reason for their endangerment. Due to shortage in their number, this species of animal has been subjected to inbreeding. It has resulted in high mortality rates and severe disabilities. About 80 percent of the white tiger cubs are born with serious birth-defects related to inbreeding, and they soon die-off.

The critical condition of this animal has attracted the attention of conservationists worldwide. World Wildlife Federation (WWF), defenders of wildlife, and many other wildlife organizations are working with the support of the government for the cause of protecting them from becoming extinct. Once they become extinct, it will not be possible to bring them back to life.

Based on your understanding of the passage, answer the questions given below:
